Project Description

Group ID: 08

23127093 – Nguyễn Gia Nghi

23127483 – Dương Đức Thịnh

23127491 – Nguyễn Minh Thuận

23127343 – Nguyễn Thành Đạt

23127139 – Hoàng Ngọc Tùng

Project: www.kontroller.com

[Introduction to the company or the business]

The Next Stage Ltd. is a software development company dedicated to building digital platforms that enhance user experience through innovation, personalization, and community. With a focus on entertainment and interactive media, The Next Stage aims to support creative expression, data-driven insight, and social connection in the digital age — starting with the global gaming community.

[What can the system do?]

The Next Stage Ltd. is currently developing www.kontroller.com, a web-based platform designed specifically for gamers to log, rate, and reflect on their gaming experiences. The system acts as a social and analytical hub, where users can track the games they've played, are currently playing, plan to play, or have dropped. Users can leave star or 10-point ratings, write detailed reviews, and read and comment on reviews by others.

The platform allows users to create curated lists, such as "Top 10 Switch Games" or "Games That Changed My Life." Each user has a personal activity timeline that logs their progress and interactions automatically. The search and filtering system enables discovery of games by genre, platform, developer, year, and more.

Users can follow friends, build their own gaming networks, and engage with a dynamic activity feed that shows what others are playing or reviewing. A "Now Playing" status lets users broadcast their current game in real-time, adding a live social element. Additionally, multiplayer party logging allows tagging friends or guildmates in game entries — similar to tagging people in photos — creating a richer, more accurate gaming history.

The system also generates personalized stats dashboards, summarizing gameplay data like most-played genres, average ratings, and monthly activity. At the end of each year, users receive a "Year in Review" — a recap of their gaming habits and highlights, similar to Spotify Wrapped.

[Key feature that is competitive against other projects]
While other platforms may offer game ratings or collections, Kontroller is uniquely positioned as a community-first, game-specific logging network. The integration of multiplayer tagging, platform-specific tracking, and real-time status sharing sets it apart from generic review or media platforms. Kontroller captures not just what was played, but how, where, and with whom — offering a detailed and social lens on a gamer's journey.

The system will be deployed in multiple phases. The initial version will include key features like logging, reviews, timeline tracking, list creation, social following, and the activity feed. Advanced features like multiplayer tagging, personalized analytics, and Year in Review will follow in subsequent updates.
